

Safety Organization Structure for Shree Shantinath Enterprises

A comprehensive overview of our organizational safety framework, workforce composition, and commitment to excellence in construction safety management.

Introduction to Shree Shantinath Enterprises

Shree Shantinath Enterprises is a **proprietor-led civil construction firm** specializing in infrastructure projects across diverse sectors. With a total workforce of **40 dedicated employees**, we encompass roles ranging from strategic management and engineering oversight to skilled trades and field labor.

Our organization maintains an unwavering commitment to **safety excellence and regulatory compliance**, aligning our practices with OSHA standards and industry best practices. This commitment ensures every team member returns home safely while delivering exceptional construction quality.

Through strategic investment in safety infrastructure, training programs, and qualified personnel, we've built a culture where safety isn't just a priority—it's a core value embedded in every decision and action across our operations.

Total Number of Employees: 150

40	5	5	30
Total Workforce	Safety Professionals	Engineers & Supervisors	Field Workforce
Complete organizational strength	Dedicated safety personnel	Technical and operational leadership	Skilled and unskilled workers

Our comprehensive workforce breakdown includes all office staff, engineers, supervisors, and field laborers—both skilled and unskilled. This composition reflects the project scale and operational requirements typical of a **mid-sized civil construction firm** operating in today's competitive infrastructure sector.

The workforce structure is designed to maintain optimal balance between technical expertise, operational supervision, and hands-on execution. This ensures efficient project delivery while maintaining rigorous safety standards across all levels of operation.

Safety Professionals: 5

Safety Manager (1)

Oversees entire safety program and reports directly to proprietor

- Strategic safety planning
- Policy development
- Budget management
- Executive reporting

Safety Officers (2)

Conduct daily operations and frontline safety activities

- Daily site inspections
- Hazard assessments
- Training delivery
- Incident investigations

Safety Coordinators (2)

Manage administrative and compliance functions

- Documentation management
- Incident reporting
- Compliance tracking
- Audit support

All safety personnel are **certified in OSHA construction safety standards** and receive continuous training in risk management, ensuring they remain current with evolving regulations and best practices in construction safety.

Engineers and Supervisors: 5

Civil Engineers: 2

Our civil engineers provide **technical oversight and design compliance**, ensuring safety is integrated from the planning phase through execution. They bridge the gap between design intent and safe construction practices.

- Design review and safety integration
- Technical problem-solving
- Quality assurance protocols
- Regulatory compliance verification

Supervisors/Foremen: 3

Supervisors direct on-site operations, enforce safety protocols, and coordinate skilled and unskilled teams. They serve as the critical link between management and field operations.

- Daily work coordination
- Safety protocol enforcement
- Team leadership and motivation
- Emergency response management

Skilled Workers: 10

Carpenters & Masons

Structural craftsmen trained in fall protection, power tool safety, and material handling best practices

Electricians

Licensed professionals specializing in electrical safety, lockout/tagout, and arc flash protection

Equipment Operators

Certified operators trained in heavy machinery safety, site awareness, and equipment maintenance

Specialized Trades

Welders, pipefitters, and other trades receiving hazard-specific safety training and certification

Our skilled workforce receives **regular safety training tailored to their specific trade hazards**, ensuring they understand and can mitigate the unique risks associated with their specialties. Strong emphasis is placed on PPE compliance, safe equipment operation, and proactive hazard recognition.

Continuous skill development programs ensure our skilled workers stay current with evolving safety technologies, techniques, and regulatory requirements in their respective fields.

Unskilled Workers: 20

Role and Responsibilities

General laborers support construction activities through essential functions including:

- Material handling and transport
- Site cleaning and organization
- Basic construction support tasks
- Tool and equipment assistance

Safety Focus Areas

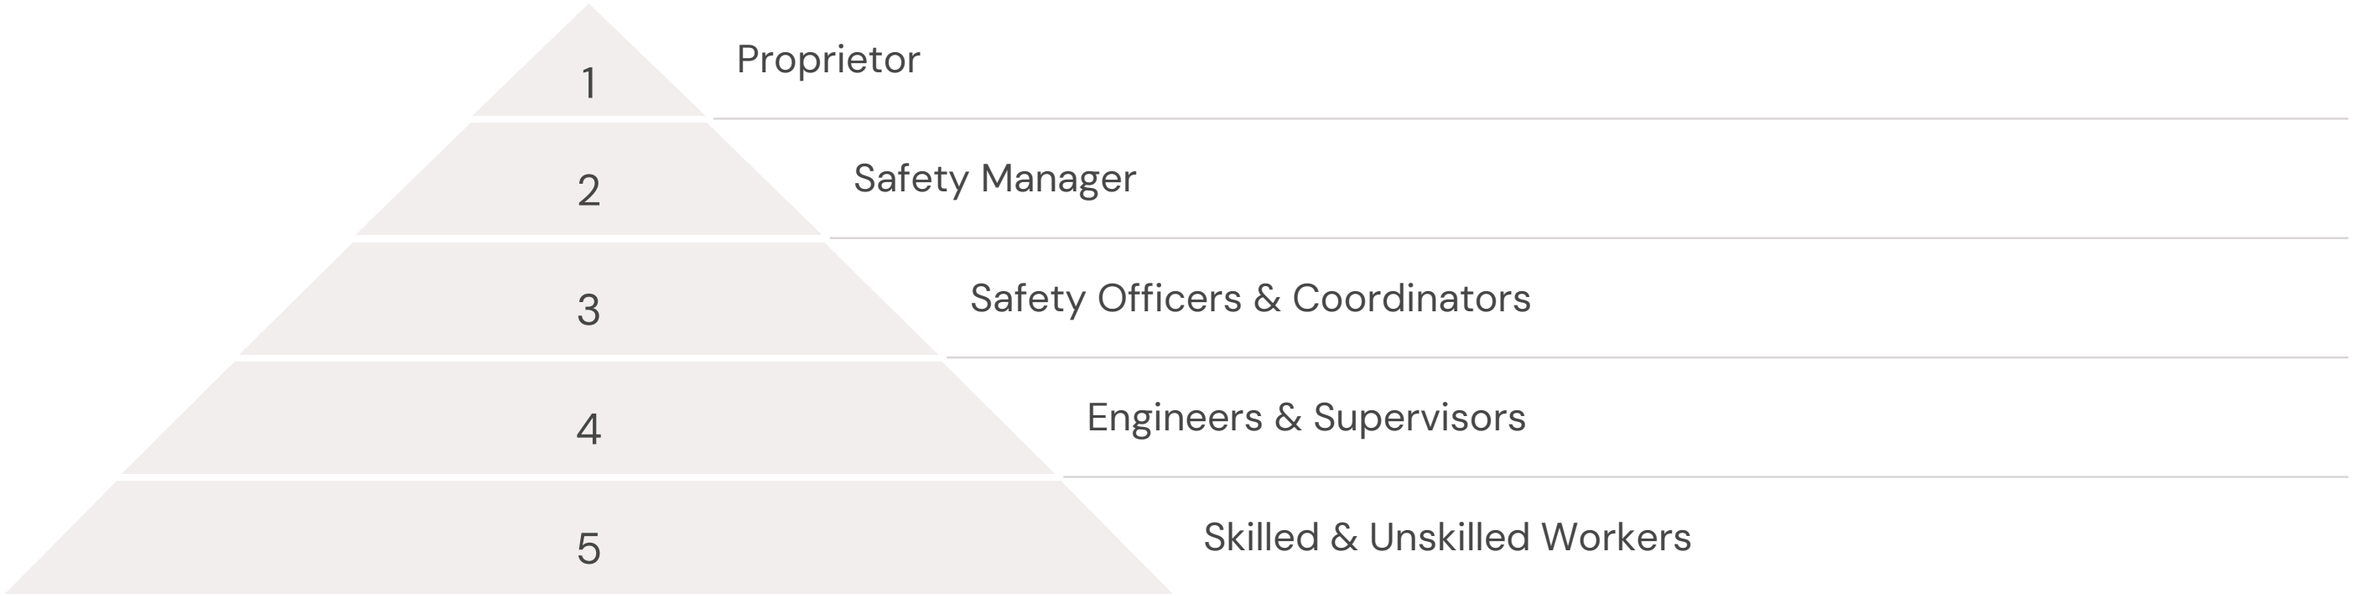

Unskilled workers receive comprehensive foundational safety orientation covering:

- Manual handling techniques
- Fall prevention awareness
- Environmental hazard recognition
- PPE proper usage protocols

> "Every worker, regardless of skill level, receives the training and supervision necessary to perform their duties safely and return home unharmed each day."

Close supervision by site supervisors ensures unskilled workers receive continuous guidance, immediate feedback on unsafe behaviors, and support in developing their safety awareness and construction knowledge.

Safety Organizational Hierarchy

Our hierarchical structure ensures **clear lines of authority and accountability** for safety management. The Safety Manager holds the authority to halt unsafe work and enforce corrective actions at any level, demonstrating our commitment to safety over schedule or cost considerations.

Communication Flow

Regular safety meetings cascade from management to field teams

Accountability

Each level responsible for implementing and monitoring safety protocols

Continuous Improvement

Bottom-up feedback ensures frontline concerns reach decision-makers

Integration of Safety Practices

Our safety integration approach aligns with **Campbell Institute recommendations** and industry best practices, ensuring our safety roles match operational risk levels across all project phases.

Key Integration Elements:

- Safety professionals embedded within project teams from inception
- Proactive hazard identification through daily job safety analyses
- Cross-functional safety committees ensuring diverse perspectives
- Real-time incident reporting and corrective action systems

01

Training Programs

Comprehensive initial and refresher training for all personnel levels

02

Safety Audits

Regular internal and external audits to verify compliance and identify gaps

03

Performance Metrics

Data-driven safety KPIs tracking leading and lagging indicators

04

Culture Development

Ongoing initiatives fostering psychological safety and worker engagement

Our Commitment

Structured Organization

Shree Shantinath Enterprises has established a **well-defined safety organization** with clear roles, adequate staffing, and appropriate authority levels to ensure effective hazard management across all operations.

Regulatory Excellence

Our safety framework ensures **full regulatory compliance** while exceeding minimum standards, positioning us as an industry leader in construction safety management and worker protection.

Continuous Investment

Ongoing investment in safety personnel, training programs, and modern safety technologies demonstrates our commitment to evolving with industry best practices and protecting our most valuable asset—our people.

Our Mission

“Our mission is anchored in a steadfast commitment to excellence, integrity, and sustainable practices. We strive to be an indispensable partner in India's renewable energy journey, offering services that not only meet but exceed expectations.”

Shree Shantinath Enterprises recognizes that safety is not merely a compliance requirement but a fundamental business value that protects our workforce, enhances productivity, and builds trust with clients and stakeholders. Our structured approach to safety organization ensures sustainable success for years to come.
